Bhuvash became very sad because he didn't get a chance to compete. So, Shivam and Harpreet plan to gift him a kite of size proportional to his sadness.

Question starts:

You are given an **integer**, sadness and you have to print a kite like pattern shown below with diagonal of length $2 \times \text{sadness} - 1$.

Note: Assume sadness to be less than or equal to 100, after all Bhuvash is a cheerful person.
