

Deceptive Numbers

ZPRAC-16-17-Lab2

[30 points]

Rachita is a mischievous girl. She, with her gang is planning to do something dangerous. They communicate with each other in a coded language. Police has found out that the gang follows a particular scheme. They always communicate using five numbers where each number represents an alphabet. 16 represents ***a***, 17 represents ***b***, 18 represents ***c*** and so on. Write a C code to help police in decoding the messages.

Input:

The input consists of five space separated positive numbers ($16 \leq \text{value} \leq 41$)

Output:

Print the corresponding five letter word

Example:

Input:

18 27 16 34 34

Output:

class
